2. If the AGM battery is not fully charged, you should go ahead and give it a boost. Do not use your alternator as a recharging tool. Use a special battery charger to bring the AGM battery to full capacity. (Don't overcharge it, though.) 3. If your storage facility has access to electricity, use a battery maintainer during storage time.

The simplest AGM battery charging cycle during storage is to let the battery sit disconnected from anyload or charger and justrecharge it every 6 to 12 months. The periodic recharging canbe doneusing the standard cycle above. Recharging compensates for self ...

The AGM battery has an almost similar structure, the main difference being the inclusion of a fiberglass mat between the two electrodes. The mat acts as a sponge, holding the electrolyte and making the battery spill-less. The AGM battery creates a large surface area for the electrodes to contact the electrolyte without the risk of flooding.
