

In this study, the energy-storage based heating and defrosting performances of an air source heat pump system with a micro-channel heat exchanger as its outdoor coil were ...

Renewable sources will play a key role in meeting the EU targets for 2030. The combined use of an aérothermal source through a heat pump and a solar source with a ...

An air-source heat pump can provide efficient heating and cooling for your home. When properly installed, an air-source heat pump can deliver up to two to four times more heat energy to a ...

In order to solve the problem that the traditional heat pump system in the cold area of North China cannot supply heat efficiently and stably, a novel solar-air source heat ...

For China, the development of low-energy buildings is one of the necessary routes for achieving carbon neutrality. Combining photovoltaic (PV) with air source heat pump ...

Abstract The paper introduced a smart renewable energy based microgrid system which is composed of three subsystems: solar photovoltaic subsystem, air source heat pump ...

In order to improve the application of renewable energy in cold regions and overcome the drawback of the low performance of traditional air source heat pumps (ASHP) in ...

In order to improve the heating performance of conventional air source heat pump system operated in cold regions, an air source heat pump system combined with latent ...

Technical obstacles under diverse climate conditions, inefficient thermal energy storage, long payback periods, and a lack of subsidy policies pose significant challenges to ...

The indirect expansion solar-assisted air source heat pump system consists of solar collectors, a hybrid thermal energy storage tank, and a dual-source heat pump.

Heat pump is an energy-saving device that can absorb heat from the surrounding environment for heating. Air source heat pump (ASHP) is a kind of heat pump with air as the ...

The thermal and energy performance of using air-source heat pump to charge PCM storage is qualitatively and quantitatively investigated.

The problem of soil heat imbalance in traditional ground source heat pump (GSHP) systems in cold regions

hinders the utilization of geothermal energy. This paper takes ...

Abstract Reasonable scheduling and control of air-source heat pumps (ASHPs) contribute to reducing operational costs for users while encouraging their participation in grid demand ...

Over the past few decades, various types of multi-energy complementary systems have been developed [1], [2]. Among them, systems based on solar collector (SC) and ...

This paper presents the performance analysis and retrofit assessment of a domestic high temperature air source heat pump coupled with thermal energy storage in terms ...

Abstract Currently, hybrid renewable energy systems with thermal energy storage have various advantages and are widely used. This paper investigated the performance of a solar-assisted ...

In addition to that, the outcomes are included into a comparison with the data obtained for the air-source heat pump (ASHP), in other words, the air-to-water heat pump, to ...

In summary, air-source vapor compression heat pump assisted absorption heat storage can realize heat storage with high density, high efficiency, and large temperature lift ...

Renewable energy-based ground source heat pump (GSHP) systems have gained traction as cost-effective and environmentally sustainable alternatives for heating and ...

To solve the design problem of the key parameters of the photovoltaic/thermal integrated air-source heat pump (PVT-ASHP) hot water system, a simulation model of the PVT ...

9%#0183; These all illustrate the effectiveness of the new structure in improving the performance of heat pump units. However, the total power consumption and ...

Electricity-driven air-source heat pumps are a promising element of the transition to lower-carbon energy systems. In this work, operational optimisation is performed of an air ...

Energy Model to Evaluate Thermal Energy Storage Integrated with Air Source Heat Pumps Preprint Conrado Ermel,¹ Marcus V.A. Bianchi,¹ and Paulo S. Schneider²

Combining phase change thermal storage technology with air-source heat pumps can improve the performance coefficient and stability of air-source heat ...
