How do power project EPC contracts work?

As a result, power project EPC Contracts normally impose two types of PLDs, one for output (ie how many megawatts the power station produces) and one for heat rate (ie how much fuel the power station burns to generate the required output of electricity).

Is price a factor in the bankability of a power station?

Obviously price is also a consideration but that is usually considered separately to the bankability of the contract because the contract price (or more accurately the capital cost of the power station) goes more directly to the bankability of the project as a whole.
