Who is batrec Industrie AG?

Batrec Industrie AG was founded in 1989. The Company's line of business includes the recovering of nonferrous metals and alloys from new and used scraps.

How did batrec Industrie start?

The company's operations began in 1989 with the recycling of household batteries. At the time these contained considerable quantities of mercury, and as such Batrec Industrie acquired significant knowledge in handling this material.

Why did batrec Industrie build a new catalyst recycling plant?

In order to accommodate the clear demand in the market for such services, at the end of 2011 Batrec Industrie built a new catalyst recycling plant, which is currently running two furnace lines handling 1000 tonnes of catalyst and 3000 tonnes of active carbon.

These mercury-added products are generally collected by local authorities and then sent to BATREC for disposal, in accordance with the environmental laws in force. Some sites that used this metal in their process

may nowadays need to decommission their site contaminated with mercury; in particular the soil.

BATREC has carried out a wide range of projects throughout the world involving different types of mercury waste, activated carbon, mercury absorbents and batteries. To illustrate our global expertise, we provide the following case studies.

These mercury containing batteries are collected by local and national authorities and then sent to BATREC for recycling in accordance with current environmental legislation. The mercury contained in the batteries vaporizes during the first processing step by pyrolysis between 700 and 800°C. It will then be recovered and processed in our facility.
