????????EV????????????????????

The BaaS model envisages leasing of the battery from a charging infrastructure company and swapping the battery in swapping stations for a recharged battery every time the battery gets discharged. The said leasing is offered as a service and akin to "software as a service", "banking as a service" and "infrastructure as a service ...

Sort of like renting a battery. You buy a vehicle, but you don't pay for the battery up front. Instead, you take a subscription that allows you to spread the cost over a longer time frame. And each time you need to swap out your discharged battery for a new one, just visit the station and you're good to go. It's Battery-as-a-Service or BaaS.

Problem definition: The electric vehicle (EV) manufacturer NIO adopts a swappable-battery design and a battery-leasing business model known as battery as a service (BaaS). It recently introduced flexible battery leasing, which allows customers to temporarily up-/downgrade their primary leased batteries based on the needs for range.

Battery swapping, a service that allows EV drivers to exchange depleted batteries for fully charged ones in minutes, offers a solution to charging wait times. While battery swapping has been explored as a concept for years, it is now gaining momentum, particularly in key markets like China, where government policies and automaker investments ...
