Can Canada build a net-zero energy system for 2050?

EY has identified an action plan to accelerate net-zero aspirations and help Canada build an energy system aligned for 2050. Focusing on the following five pillars can help get the country back on track with its net-zero commitments. Download the Energy Transition in Canada - Pathway to the 2050 Energy System Report.

How can Canada build a clean and affordable electricity system?

The Government of Canada is proposing to use all the tools at its disposal to support and collaborate with provinces and territories to build clean, affordable, and reliable electricity systems. These efforts can be grouped into four categories: convening and coordination; investment; regulation; and targeted policy. 1. Convening and Coordination

Does Canada have a clean electricity supply?

Electricity supply varies significantly across the country, as does the scale of the challenges to green and expand individual electricity systems. Provinces such as Quebec, Manitoba, British Columbia, and Newfoundland and Labrador have vast hydroelectricity resources providing them with abundant clean energy and storage capabilities.

Why should Canada build a net-zero electricity system?

Building net-zero electricity systems to power Canada's economy also represents bold action to reduce greenhouse gas emissions, strengthen grid resiliency, improve air quality, and create a healthier environment that better protects our lands, waters, and biodiversity.

What makes Canada a great energy supplier?

We're also a Tier 1 nuclear nation and a recognized leader in hydrogen and fuel-cell technologies, while wind and solar energy are the fastest-growing sources of electricity in Canada. In short, energy is part of our national DNA. We have what it takes to be a supplier of choice as global demand for clean electricity grows exponentially.

Will Canada generate more electricity without CCUS?

To accommodate the dramatic increase in electricity use, Canada will generate more electricity from clean sources such as wind, nuclear and hydro. At the same time, fossil fuel electricity generation without CCUS declines rapidly in response to increasingly strong climate policies.
