

Canada Igcy power

How much electricity does Canada produce in 2022?

In 2022, Canada produced 639 terawatt hours of electricity. 70% of Canada's electricity comes from renewable sources and 82% from non-greenhouse gas (non-GHG) emitting sources such as solar, hydro, wind and nuclear power. Canada is the world's third largest producer of hydroelectricity. 62% of Canada's electricity comes from hydroelectric sources.

Is Canada ready to clean electricity?

Approximately 4 in 5 Canadians live in provinces where electricity is already largely decarbonized (more than 90% non-emitting). In this regard, Canada as a whole is already well ahead in the global race to clean electricity.

Why is reliable electricity important in Canada?

Reliable electricity is vital to the success of Canada's economy and to the health of all Canadians. Canadians require reliable power systems for countless daily needs, from winter warmth to cold refrigerators. The energy transition will only add to this list as new equipment, vehicles and industrial sectors shift from fossil fuels to electricity.

Which provinces produce the most electricity in Canada?

Figure 1 shows that while hydro is the largest source of electricity in Canada (59.4% of total generation in 2018), not every region has adequate or available hydro resources to supply its needs. In Alberta, Saskatchewan, and Nova Scotia, fossil fuels like coal and natural gas form the bulk of electricity generation.

Will Canada's Electricity Regulations work everywhere?

But the national organization that represents Canada's electricity industry argues the regulations won't do that everywhere.

Why is electricity a win-win-win for Canada?

As Canada's demand for electricity grows, the opportunity to power our communities, our businesses, and our transportation with clean, affordable, and reliable power is a win-win-win--for workers, for affordability, and for the environment.

LGCY Power, established in 2014, has been an active participant in the solar industry, providing services across 30 states. Our evaluation takes a closer look at their offerings, customer experiences, and industry standing, presenting you with an unbiased perspective to aid in your solar journey decision-making.

Why Choose LGCY Power to Go Solar. North Carolina gets about 213 sunny days per year (the national average is 205), which makes it a highly suitable location for solar panel installation.
