Is a Canadian company concentrating on a long-range solid-state battery?

The Boucherville, Que., plant has quietly been producing long-range, solid-state batteries since 2007. But now it appears there is growing interest in centring the technology in Canada from Hon Hai Precision Industry Co. (also known as Foxconn), a Taiwan-based electronics manufacturing giant.

What is a solid-state battery?

This improves performance in practically every way and represents a giant leap forward for battery technology. "Solid-state batteries, which do not contain liquid electrolytes and can charge quicker, last longer and be less prone to catching fire than the lithium-ion batteries currently in use.

Are solid-state batteries better than lithium-ion batteries?

Solid-state batteries offer several advantages over traditional lithium-ion batteries. They have a higher energy density, which means they can store more power in a compact design, making Yoshino Power Stations lighter and easier to carry.

Are blue solutions solid-state batteries cheaper than nickel-manganese-cobalt batteries?

Blue Solutions' solid-state batteries are lithium-metal-polymer (LMP) batteries. Bouveret cites a 30 per cent cheaper manufacturing cost to making LMP batteries compared to nickel-manganese-cobalt (NMC) batteries.

Is a battery liquid free?

At the current state of solid-state technology, no mass-produced battery is completely liquid free. Some residual binding fluid, composing less than 5-10% of the total battery's volume, remains as a result of the manufacturing process. Please let us know if you have any additional questions.
