The power generated by the solar panels connects directly into the electric utility feed. In Cayman Islands, this process is called the CORE program. Inverters: Grid-Tie Inverters (interties) convert DC power from PV modules into AC power to be fed into the utility grid. There are two major types of grid-tie inverters: string and micro inverters.

A combination of wind, solar and battery power like the microgrids used at HMS Eaglet base in the UK can take a building completely off grid. Wind power may be the forgotten element in the Cayman Islands' spluttering efforts to shift to renewable energy, according to two entrepreneurs seeking to bring new technology to the islands.
