

Chile power backup for refrigerator

People assume that an uninterruptible power supply (UPS) can provide backup power to any device or appliance. In most cases, they're right. However, appliances like refrigerators have unique power consumption patterns that make them challenging to use with a UPS. Yes, you can run a fridge on a UPS battery backup.

Running Watts: Once running, refrigerators use much less power, generally around 100 to 800 watts, depending on the model and size. Knowing these figures helps you choose a backup system that can handle both the initial surge and the continuous power needs of your refrigerator. [Best Battery Backup For Refrigerator](#)

Then get your fridge datasheet, it has max current/wattage on it. This is you max that the supply needs to provide. At startup fridges draw a lot of power momentarily, that a cheap neater won't detect. At these days your max power in watts is around the same number as capacity in watt-hours. Check the specs.
