

Improving power conversion efficiency (PCE) is important for broadening the applications of organic photovoltaic (OPV) cells. Here, a maximum PCE of 19.0% (certified value of 18.7%) is achieved in single-junction OPV cells by combining material design with a ternary blending strategy. An active layer comprising a new wide-bandgap polymer donor ...

The dependence of the OPV performances on the top electrode was investigated. The results show that far better results are achieved when the top anode MoO<sub>3</sub>/Ag/MoO<sub>3</sub> is used. The OPV efficiency obtained was only 20% smaller in comparison with the opaque OPV, but with a transparency of nearly 50% in a broad range of the visible light (400-600 ...

In this work, the optimization of alkyl chains is performed on a chlorinated nonfullerene acceptor (NFA) named BTP-4Cl-BO (a Y6 derivative) and very impressive photovoltaic parameters in OPV cells are obtained. To get more ordered intermolecular packing, the n-undecyl is shortened at the edge of BTP-eC11 to n-nonyl and n-heptyl. As a result ...

Organic photovoltaic (OPV) cells are a promising clean energy technology that uses organic semiconductors to convert sunlight to electricity.[1-4] In the past few years, the OPV field achieved great progress with the rapid increase of power conversion efficiencies (PCEs). At present, under the standard

Organic photovoltaic (OPV) solar cells aim to provide an Earth-abundant and low-energy-production photovoltaic (PV) solution. This technology also has the theoretical potential to provide electricity at a lower cost than first- and second-generation solar technologies. Because various absorbers can be used to create colored or transparent OPV ...

The nonfused thiophene-benzene-thiophene (TBT) unit offers advantages in obtaining low-cost organic photovoltaic (OPV) materials due to its simple structure. However, OPV cells, including TBT-based acceptors, exhibit significantly lower energy conversion efficiencies. Here, we introduce a novel approach involving the design and synthesis of three TBT-based ...

In this paper we describe high-performance PM6:BTP-eC9-based organic photovoltaic (OPV) cells prepared using non-halogen solvents, with the goal of minimizing any potential environmental pollution. We investigated three green solvents (toluene, o-xylene, and 1,2,4-trimethylbenzene) as replacements for the commonly used chloroform. Using UV ...

The power conversion efficiency of the most efficient organic photovoltaic (OPV) cells has recently increased to over 10%. It is necessary to identify the factors limiting the device efficiency for further improvement in performance. In conventional inorganic p-n junction solar cells, charge pairs are generated spontaneously upon

photon ...

Introduction. As a promising solar energy-harvesting technology, organic photovoltaic (OPV) cells have advantages like light-weight, flexibility, transparency, and potential low costs 1 - 3 the last three decades, great efforts have been devoted to material design, device engineering, morphology optimization, and mechanism study, contributing to the ...

When the two acceptors are fabricated organic photovoltaic (OPV) cells by combining with a wide optical gap polymer donor, the TBT-6 with strong crystallization forms large domain sizes in bulk heterojunction (BHJ) blend. As a result, the TBT-6-based OPV cell shows a low power conversion efficiency (PCE) of 9.53%. In contrast, the TBT-2 with ...

This surpasses the previous record (13.1% PCE by Waystech) by 11%, relatively, and reduces the efficiency gap between OPV record cells and modules from 32% to 24%. 1, 12 Since this gap is found to be in the range of 10%-15% for all first- and second-generation PV technologies, this will also be a realistic target for emerging third-generation ...

The photovoltaic performance of organic photovoltaic (OPV) cells can be significantly improved by regulating the aggregation structure and film formation kinetics of the constituent materials. However, many regulation strategies, including the use of additives and annealing, require complex fabrication processes and additional investments ...

Dubai-based AMEA Power has secured a 25-year PPA from Djibouti's state-owned utility, 'lectricit#233; de Djibouti (EDD), for a 25 MW solar-plus-storage plant it plans to build in Grand Bara, south...

OverviewStructureWorking PrincipleDevice ArchitectureFunctions/ApplicationsChallenges in Fullerene based BHJ OPVPolymer-fullerene bulk heterojunction solar cells are a type of solar cell researched in academic laboratories. Polymer-fullerene solar cells are a subset of organic solar cells, also known as organic photovoltaic (OPV) cells, which use organic materials as their active component to convert solar radiation into electrical energy. The polymer, which functions as the donor material in these ...

Organic Photovoltaic (OPV) devices convert solar energy to electrical energy. A typical OPV device consists of one or several photoactive materials sandwiched between two electrodes. ... In a bilayer OPV cell, sunlight is absorbed in the photoactive layers composed of donor and acceptor semiconducting organic materials to generate photocurrents ...

On the receiver end, the fabricated OPV panels shown in Fig. 2 were used, and the output from each OPV cell was connected to a custom-designed receiver circuit that contained two branches for ...

Photovoltaics and solar cells convert solar energy into electricity by allowing photons to set electrons free

thereby generating a flow of electricity. ... Find advantages of organic photovoltaic (OPV) technology & offers of our materials for innovative OPV research. Synthesis, Properties, and Applications of Perovskite-Phase Metal Oxide ...

In this work, the optimization of alkyl chains is performed on a chlorinated nonfullerene acceptor (NFA) named BTP-4Cl-BO (a Y6 derivative) and very impressive photovoltaic parameters in OPV cells are obtained. To ...

Polymer-fullerene solar cells are a subset of organic solar cells, also known as organic photovoltaic (OPV) cells, which use organic materials as their active component to convert solar radiation into electrical energy. The polymer, which functions as the donor material in these solar cells, and fullerene derivatives, ...

INTRODUCTION. Organic photovoltaic (OPV) technology is a promising candidate in use of sustainable solar energy; the power conversion efficiency (PCE) is growing very fast with great potential in practical applications [ ] the last 30 years, development of new materials, optimization of device processing methods and blend morphology [ ], and an ...

Organic PV cells Organic photovoltaic (OPV) cells, also known as organic solar cells, are a type of solar cell that converts sunlight into electricity using organic materials such as polymers and small molecules. 83,84 These materials are ...

To meet the industrial requirements of organic photovoltaic (OPV) cells, it is imperative to accelerate the development of cost-effective materials. Thiophene-benzene-thiophene central unit-based acceptors possess the advantage of low synthetic cost, while their power conversion efficiency (PCE) is ...

Organic photovoltaic (OPV) cells have demonstrated remarkable success on the laboratory scale. However, the lack of cathode interlayer materials for large-scale production still limits their practical application. Here, we rationally designed and synthesized a cathode interlayer, named NDI-Ph. Benef ...

Despite more potential in realizing higher photovoltaic performance, the highest power conversion efficiency (PCE) of tandem organic photovoltaic (OPV) cells still lags behind that of state-of-the-art single-junction cells. In this work, highly efficient double-junction tandem OPV cells are fabricat ...

Organic photovoltaic (OPV) cells have demonstrated remarkable success on the laboratory scale. However, the lack of cathode interlayer materials for large-scale production still limits their practical application. Here, we rationally designed and synthesized a cathode interlayer, named NDI-Ph. Benefiting from their well-modulated work function and self-doping ...
