

How has Ecuador's energy consumption changed over the years?

Ecuador's energy production increased by a compounded growth rate of 0.5% per year from 2011 to 2021, and renewables accounted for most of the increase. The country's energy consumption also increased by a compounded growth rate of 0.5% per year over the same period, down from 4.9% per year the decade prior.

How much energy does Ecuador use?

In 2021, the country consumed 21 thousand short tons, 15 which it imported primarily from the United States, followed by Peru. Ecuador relied heavily on fossil fuel (which include oil, natural gas, and coal) production for power generation a decade ago, with fossil fuel-powered plants accounting for about 43% of total energy production in 2011.

What is Ecuador's Energy Outlook?

Ecuador's energy outlook has undergone a drastic change in recent times. The country is fast moving from conventional sources of energy to more clean, renewable-based energy. There is a shift from a heavy reliance on fossil fuels to nearly complete self-sufficiency through renewable energies, particularly hydroelectric power.

Does Ecuador have an electricity market?

In this research, an analysis of the electricity market in Ecuador is carried out, a portfolio of projects by source is presented, which are structured in maps with a view to an energy transition according to the official data provided.

Will Ecuador have a power shortage in 2023?

Ecuador is experiencing power generation shortages in 2023, and analysts expect them to extend to 2024. The Energy Ministry and CELEC plan to issue tenders to add additional generation. Future projects under consideration include hydro, geothermal, wind, and biomass.

Does Ecuador have a natural gas market?

Ecuador's natural gas market is less developed than its oil sector; it has a 0.9% share of total energy production and 1.7% share of energy consumption (Figure 1). Natural gas in Ecuador is mostly used by the industry sector¹.
