Solar panels are typically connected in long series to generate a high system voltage, often exceeding 1000 V, which is used to power solar inverters. Figure 5: Sample module with PID. The large voltage difference between the grounded frames and solar cells may be too much for low-quality solar cells to manage, causing them to fail.

At Sunny Side Solar we are dedicated to helping homeowners harness the power of sun to protect themselves from future electricity rate increases. As industry leaders in solar installation, we specialize in tailoring solar solutions that match your specific needs and budget.
