Electric back up power Estonia

Power banks with different capacities (mAh) and from different makers. Capacity indicates how many times you can charge a battery - for example, if you want to charge a phone with a 5000mAh battery, then a 10000mAh powerbank charges it approximately 2 times. If you're going camping or travelling, then we recommend a minimum of 10000mAh bank.

Over the past 12 months, from November 2023 to October 2024, electricity consumption in Estonia was divided among net imports, low-carbon sources, and fossil fuel sources. Net imports accounted for slightly more than a third of Estonia's electricity, which indicates a significant level of reliance on external sources.

As Estonia is rather flat, the tilt of rivers is small and therefore the head for waterpower is usually 2 - 6 m. The technical potential of hydropower does not exceed 30 MW in Estonia. The number of existing hydropower stations in disrepair but considered to pay off the refurbishing, is about 25, with the total rated output power of some 6 MW.

The standard voltage in Estonia is 230V, and the frequency is 50Hz. Devices from countries with different voltage standards, like the United States (120V), may require a voltage converter in addition to a plug adapter. Do you need a power adapter in Estonia? Whether you'll need a power adapter depends on the type of plug your devices use.
