How can the KSA reduce its dependence on fossil fuels?

The KSA, as an oil-dependent economy, must diversify to reduce its dependence on fossil fuels. In this regard, diversifying the economy by growing RE sources creates a more balanced and sustainable economy. Lastly, revenue from oil exports (B23) has achieved the lowest importance.

Is there a problem in the KSA?

New jobs in RE and job losses in existing industries could be problems as the KSA shifts from an oil-driven economy to one based on RE. The third highest-ranked sub-barrier was cultural and social norms (B74). RE should be acknowledged culturally in the KSA, where oil is a major economic and social factor.

How does Saudi oil affect RE investment?

The Saudi economy heavily relies on revenue from oil exports, which can deter investments in RE. Transitioning to RE while diversifying the economy away from oil is a complex economic challenge. If there is insufficient demand for RE products or services in the market, it can hinder investments and growth in the sector.

What are the best solution strategies for RE adoption in the KSA?

First, the fuzzy AHP method was used to assess the weights of the main barriers and sub-barriers impeding the adoption of RE in the KSA. Next, the fuzzy TOPSIS method is used to rank the best solution strategies for the successful adoption of RE technologies in the context of the KSA. Fig. 2. The hierarchical decision-making framework. 5.1.

What are the barriers to RE technology adoption in the KSA?

The fuzzy AHP method showed that technology (B4), followed by the environment (B5) and market (B3), are the key barriers to the adoption of RE technologies in the KSA. These findings are consistent with those of previous studies.
