Will a wind farm deliver a third of the Isle of Man's electricity needs?

Plans to build a wind farm capable of delivering around a third of the Isle of Man's electricity needs by 2026 are on schedule. Manx Utilities updated the Council of Ministers last week and outlined potential sites for the 20MW windfarm, alongside plans to install 10 Megawatts of solar on public buildings.

Could a CAIR vie windfarm produce 149gwh of electricity?

But Manx Utilities has published an estimate of 64% for the potential load factor at its proposed Cair Vie windfarm at Earystane. It says a 26.4MW windfarm there could produce a potential yield of 149GWh of renewable electricity per year- enough to supply more than a third of current electricity demand in the Isle of Man.

Could a generation hub produce 25% of the Isle of Man's electricity?

The company,IPV Flexgen is working with the landowners of Andreas Airfield and evaluating the potential for a generation hub that could produce up to 25%of the electricity required by the Isle of Man.

How much energy will earystane windfarm produce?

Manx Utilities says its experts have used the best data available to calculate the potential output of the proposed windfarm at Earystane. UK government figures suggest that the average load factor - which the government defines as the 'proportion of maximum [energy] generation achieved' - of onshore windfarm projects commissioned in 2023 is 45%.

Can the Isle of Man provide stabilising power to GB or ROI?

Opportunities for the Isle of Man to provide stabilising power to GB or ROI from a large-scale baseload power station,e.g. biomass or a small modular reactor? Neither option is without challenge,but likely provide the greatest potential for export. These options have not been explored in the analysis.

Will the Isle of Man be short of baseload power?

Both UK and RoI are predicted to become short of baseload power over the next decade. Opportunities for the Isle of Man to provide stabilising power to GB or ROI from a large-scale baseload power station, e.g. biomass or a small modular reactor? Neither option is without challenge, but likely provide the greatest potential for export.
