

A novel hybrid multi-criteria decision-making approach for solar photovoltaic power plant site selection based on the quantity and quality matching of resource-demand

In this paper, considering the important function of pumped-storage power station (PPS) in promoting the "source-grid-load-storage" synergy and complement in the construction ...

For wind-photovoltaic-shared energy storage project, there are few studies on site selection, but a large number of works related to the location of renewable energy power ...

The simulation test also reveals the important role of energy storage unit in power grid demand peaking and valley filling, which has an important impact on balancing the ...

The site selection of PPSs oriented to the EI needs to consider multiple complex factors such as geological water sources, engineering construction, economic benefits, and ...

The development of renewable energy is an effective avenue for achieving net zero goals. It requires many energy storage systems (ESSs) for adjusting the unstable power ...

Site selection; The site selection of an energy storage power station is a key step in the early stages of construction. The location selection of a power station needs to consider factors such ...

Abstract Wind-photovoltaic-complemented storage power plants (WPCSPP), as a significant application of clean energy technology, it will alleviate the bottleneck in new energy ...

As the power system shifts from conventional synchronous generation (SG) to converter-interfaced generation (CIG), the reliance on CIG for maintaining frequency and voltage stability ...

At present, energy storage technology mainly includes physical energy storage, electrochemical energy storage and hydrogen energy storage. Physical energy storage is ...

The applications of energy storage systems have been reviewed in the last section of this paper including general applications, energy utility applications, renewable ...

These approaches have been successfully applied for solar or EV charging station site selection, but their use for solar-energy-assisted electric vehicle charging stations ...

A two-stage framework for site selection of underground pumped storage power stations using abandoned coal mines based on multi-criteria decision-making method: An ...

The pumped storage power station (PSPS) is a special power source that has flexible operation modes and multiple functions. With the rapid economic development in ...

The rapid development of renewable energy sources, represented by photovoltaic generation, provides a solution to environmental issues. However, the ...

This paper proposes a benefit evaluation method for self-built, leased, and shared energy storage modes in renewable energy power plants. First, energy storage ...

The pumped storage power station realizes grid connected power generation through the conversion between the potential energy of surface water and mechanical energy.

As a regulating power source and energy storage power source, pumped hydro energy storage (PHES) has strong regulating ability and is characterized as a reliable ...

This paper analyzes the uncertainty of new energy, and constructs a single distribution network energy storage station model based on the analysis results.

In addition to these common metrics, to accurately assess the impact of grid access point distance and capacity constraints on wind, solar, and energy storage station site ...

Pumped-storage power station (PPS) will play an important role in the green and low-carbon energy era of "source-grid-load-storage" synergy and multi-energy complementary ...

Optimal site selection study of wind-photovoltaic-shared energy storage power stations based on GIS and multi-criteria decision making: A two-stage framework 2022, ...

The integration of high proportions of renewable energy reduces the reliability and flexibility of power systems. Coordinating the sizing and siting of battery energy storage ...

Therefore, a two-stage multi-criteria decision-making model is proposed to identify the optimal locations of shared energy storage projects in this work. In the first stage, ...

A multi-base station cooperative system composed of 5G acer stations was considered as the research object, and the outer goal was to maximize the net profit over the ...
