

Energy storage project intermediary fee standards

Does energy storage get the same treatment across the EU?

Across Member States Executive Summary Energy storage doesn't receive the same treatment across the European Union as far as grid fees go: different technologies, different location (behind-the-meter vs front of the meter), have to face a variety of tariff structures, often not consistent with the EU-level rules

Why do energy storage projects need project financing?

The rapid growth in the energy storage market is similarly driving demand for project financing. The general principles of project finance that apply to the financing of solar and wind projects also apply to energy storage projects.

Should energy storage be guaranteed a level playing field and cost reflectiveness?

Recommendations: Energy storage should be guaranteed a level playing field and cost reflectiveness in the EU, by abolishing non-cost reflective grid charges that still exist in national regulations, prioritising the full implementation of the new electricity market design (and no

Can LPO finance energy storage projects?

LPO can finance short and long duration energy storage projects to increase flexibility, stability, resilience, and reliability on a renewables-heavy grid. Why Energy Storage?

What is energy storage?

Energy storage encompasses an array of technologies that enable energy produced at one time, such as during daylight or windy hours, to be stored for later use. LPO can finance commercially ready projects across storage technologies, including flywheels, mechanical technologies, electrochemical technologies, thermal storage, and chemical storage.

Should energy storage tariffs be cost-reflective?

as set by the Electricity Market Regulation. As per art. 18 of the Regulation, tariffs should be cost-reflective and not discriminate against energy storage - quite often, storage operators face disproportionate network fees that don't take into account the benefit brought by energy stor
