

Energy storage project prospect analysis and design proposal

How do energy storage systems respond to peak user demand?

To absorb excess renewable energy generation and respond to peak user demand, the optimal solution lies in efficient, long-duration, and large-scale energy storage systems. However, traditional storage systems often face difficulties to provide both rapid response and high efficiency over extended durations.

How are energy and exergy analyses performed?

Under identical input conditions, the thermodynamic parameters of the proposed system and the reference system are calculated. Energy and exergy analyses are conducted for both systems to further compare the efficiency improvements of the coupled system and analyze the mechanisms underlying its enhanced energy efficiency.

Can a large-capacity hydrogen storage system meet the demand for energy storage?

For instance, if the portion of electricity with rapid fluctuations and the user's peak load are relatively small, a larger-capacity CB could serve as the base load for energy storage, while a smaller-capacity hydrogen storage system could meet the demand for rapid-response energy storage.

How to calculate RTE and exergy efficiency of hydrogen energy storage system?

The round-trip energy efficiency (RTE) and exergy efficiency of the hydrogen energy storage system are defined as follows: $\eta_{ex,h} = \frac{W_{e,H2}}{W_{e,H2} + W_{c,H2}}$ where $W_{e,H2}$ is the power generated by the H2 expander of the SOFC subsystem, kW; $W_{c,H2}$ is the power input of the H2 compressor of the PEMEC subsystem, kW.

Do Peak-Valley power prices affect energy storage projects?

This section sets five kinds of peak-valley price difference changes: 0.1 decreased, 0.05 decreased, 0.05 increased, 0.1 increased, investigating the economic influence of altering peak-valley power prices on energy storage projects, as shown in Fig. 8.

How can big data industrial parks improve energy storage business model?

Combined with the energy storage application scenarios of big data industrial parks, the collaborative modes among different entities are sorted out based on the zero-carbon target path, and the maximum economic value of the energy storage business model is brought into play through certain collaborative measures.
