

Energy storage station fire protection interval requirements

What are the fire and building codes for energy storage systems?

However, many designers and installers, especially those new to energy storage systems, are unfamiliar with the fire and building codes pertaining to battery installations. Another code-making body is the National Fire Protection Association (NFPA). Some states adopt the NFPA 1 Fire Code rather than the IFC.

What are the requirements for energy storage systems?

The energy storage system shall comply with applicable requirements in Section 1206.15. The energy storage system shall be installed in accordance with the manufacturer's instructions and their listing. Individual energy storage system units shall be separated from each other by at least 3 feet (914 mm).

Are energy storage systems fire-resistance rated?

1206.11.3 Fire-resistance rated construction. Rooms and other indoor areas containing energy storage systems shall be separated from other areas of the building in accordance with Section 1206.14.4 and Chapter 7 of this code. Energy storage systems shall be permitted to be in the same room as the equipment they support.

Can a walk-in energy storage system be a fire hazard?

Where approved by the fire code official, rooms, areas and walk-in energy storage system units containing electrochemical energy storage systems that exceed the amounts in Table 1206.12 shall be permitted based on a hazard mitigation analysis in accordance with Section 1206.5 and large-scale fire testing complying with Section 1206.6.

Are energy storage systems safe?

In 2020, the Uniform Code was amended to include the latest safety considerations for energy storage systems. All energy storage systems must be designed and installed in accordance with all applicable provisions of the Uniform Code.

Does a walk-in energy storage system need spacing?

In walk-in energy storage system units, spacing is not required between energy storage system units and the walls of the enclosure. Fire suppression system connections to the water supply shall be permitted to use approved temporary connections.
