

Does New Zealand need fossil fuel subsidy reform?

As an APEC economy, New Zealand seeks to build momentum on fossil fuel subsidy reform. APEC Leaders have committed to rationalise and phase out inefficient fossil fuel subsidies that encourage wasteful consumption while recognising the importance of providing those in need with essential energy services.

What is New Zealand's energy self-sufficiency?

In 2023, national self-sufficiency remained unchanged in at 73 per cent. Key contributors to New Zealand's energy self-sufficiency are coal and oil -- Self-sufficiency: The ability of a country to meet its own energy supply needs through domestic production.

What is a total primary energy supply in New Zealand?

Total primary energy supply: The total amount of energy available for use in New Zealand, accounting for domestic production and trade. Total final consumption: Energy consumed by end-users such as factories and businesses. The share of renewables in total primary energy supply fell slightly, down 0.7 percentage points to 42.8 per cent.

How does New Zealand meet its energy needs?

New Zealand relies on a combination of domestically produced and imported fuels to meet its energy needs. A common metric used internationally to measure this is a self-sufficiency indicator, which shows how well we can meet our own energy supply needs through domestic production.

What is the ffsr initiative?

At the 13th Ministerial Conference in February 2024, 48 co-sponsors of the FFSR Initiative presented a comprehensive plan to advance work towards rationalisation, phase-out or elimination of harmful fossil fuel subsidies was presented. This includes;

What type of fuel does New Zealand use?

As the wikipedia page explains, this is because the refinery at Marsden Point is unable to process it. The refinery uses a medium-sour crude oil, but most crude oil produced in New Zealand is light-sweet. Who knew? This all seems a bit daft. Refining oil overseas and then shipping it around the world to us uses vast amounts of energy.

and anti-competitive, and a new law was enacted in 1998 to allow for liberalization and closure of the Fund. The transition has not been without its challenges, including ongoing high regional energy prices, exacerbated by having to compete with neighbours who subsidize energy (Thailand, Indonesia, Malaysia, South Korea and

Taiwan).

Where our energy comes from. Around 60% of New Zealand's energy is supplied by fossil fuels. Once energy losses and distribution are taken into account, fossil fuels make up about 70% of our total final consumption. This includes petrol and diesel for vehicles, coal and gas for industrial boilers and household gas and LPG.
