Is gravity energy storage a viable solution?

Gravity energy storage is emerging as a viable solution to address a major challenge of solar and wind power which is intermittent supply. As the world struggles with climate change and the need for sustainable energy, the push for renewable energy has become urgent. Solar energy, though abundant, faces the challenge of intermittent supply.

Are gravity energy storage systems viable in Malaysia?

Gravity energy storage offers a sustainable long-term option that can complement other storage systems and help balance supply and demand on the grid. Underground gravity storage systems in Malaysia are viable given the many abandoned mining sites in the country including those in Tronoh, Batu Gajah and Bestari Jaya.

A generally applied mechanism of gravity based storage at PV generation site is proposed by Gravity Power Company in 2011, which was based on Hydraulic A Pumped Hydro Storage (PHS) may be considered storage technology. As a gravity battery as it uses the gravitational potential energy.

Could gravity energy storage help stabilise power grids?

With its ability to store large amounts of solar energy at a lower lifetime cost compared to traditional batteries, gravity energy storage could significantly stabilise power grids and facilitate the global shift toward renewable energy. While challenges persist, ongoing research and the implementation of pilot projects indicate a bright future.
