

# Grenada utility solar

Does Grenada have solar power?

Solar photovoltaics (PV) have high potential on Grenada because the country's global horizontal irradiation exceeds 5 kWh/square meters per day. A 2- to 4-MW PV installation is planned, but no utility-scale solar plants are currently in operation.

Does Grenada get electricity from diesel?

(Picture: Martin Falbisoner) With abundant sunshine and three active volcanoes, the Caribbean islands that make up Grenada are perfect for solar and geothermal power. Yet, despite the government's concern about climate change, they get nearly all their electricity from expensive and polluting diesel.

Where does Grenada get its energy from?

Grenada derives almost all of its energy from imported hydrocarbons. In 2020, non-renewables accounted for roughly 98% of installed capacity and electricity generation, with solar energy making up the difference.

How much electricity does Grenada use?

In 2020, Grenada produced 223 GWh of electricity, relying mainly on fossil fuels (98.12%), with a small contribution from solar energy (1.88%). In 2018, peak demand was 33.2 MW. In 2016, Grenada consumed 185.1 million kWh of electricity. As of 2018, 95.3% of the population had access to electricity.

How much does solar cost in Grenada?

According to data from 2014, the costs of utility-scale solar in Grenada are estimated to be between \$0.21/kWh and \$0.44/kWh; wind costs are estimated to be between \$0.05/kWh and \$0.20/kWh.

Who owns the electricity in Grenada?

Utility investors: 50% with U.S.-based WRB Enterprises; the public holds 25%; and the government, its employees, and the National Insurance Scheme Grenada hold the remaining 25%. Nearly 99% of electricity is sourced from diesel fuel. The utility maintains an installed capacity of 48.6 MW spread across the three islands.
