

# Guatemala daylight solar energy

What is the average solar irradiation in Guatemala?

According to the solar maps of Solar and Wind Energy Resource Assessment (SWERA), Guatemala's average solar irradiation is 5.3 kWh/m<sup>2</sup>/day. Few small photovoltaic projects have been implemented in several Guatemalan remote areas, which have no access to grid electricity.

Is Guatemala a good place to invest in solar energy?

Guatemala is the second largest Central American power market, with a goal to increase renewable energy use. Relatively high levels of solar irradiance and large areas of cleared land give the country a strong potential for increased solar energy development.

How much energy does Guatemala use?

For example; out of possible 5000MW hydroelectric power potential, Guatemala uses only 853 MW (17.06%), and of 1000MW potential of geothermal energy, the country uses just 49.2MW (4.92%). Guatemala's total energy production reached approximately 9.6Mtoe by the year 2016.

What is the future of energy in Guatemala?

Competition with the possibility of developing cheaper energy sources, such as: hydropower & natural gas. The Guatemalan government has a plan of using geothermal power to supply for two thirds of the country's energy needs by 2022. Thus reducing oil imports and stabilizing the country's energy supply.

What is the National Energy Plan of Guatemala?

New techniques and technologies will be needed to decarbonise these areas. The National Energy Plan of Guatemala defines the promotion of renewables as a priority. The plan aims to promote the use of clean and environmentally friendly energy for domestic consumption without losing sight of energy security and the need for supply.

Why did BMR decide to buy a solar farm in Guatemala?

As part of its evaluation process, BMR determined that the solar farm offered a strong return that was supported by Guatemala's well-established and stable regulatory system. BMR navigated a complex and cooperative sales process that involved four owners across three legal jurisdictions.

The average daily incident shortwave solar energy experiences some seasonal variation over the course of the year. The brighter period of the year lasts for 2.3 months, from March 3 to May 11, with an average daily incident shortwave energy per square meter above 6.4 kWh. The brightest month of the year in Flores is April, with an average of 6. ...

Daylight saving time is not observed in Guatemala City during 2024. For reference, on June 20, the longest day of the year, ... The average daily incident shortwave solar energy in Guatemala City is essentially constant

# Guatemala daylight solar energy

during July, remaining within 0.2 kWh of 5.3 kWh throughout.

Daylight saving time is not observed in Antigua Guatemala during 2024. For reference, on June 20, ... The average daily incident shortwave solar energy in Antigua Guatemala is essentially constant during December, remaining within 0.1 kWh of 5.4 kWh throughout.

Renewables such as solar panels, wind turbines and hydroelectric dams generate electricity without burning fuels that emit greenhouse gases and other pollutants. As the costs of solar panels and wind turbines have fallen dramatically in ...

Guatemala City, located in the tropics of Guatemala, is a great place for generating solar energy all year round. This is because it gets consistent sunlight throughout most of the year. The energy generated from solar panels ...

A wet day is one with at least 0.04 inches of liquid or liquid-equivalent precipitation. The chance of wet days in Zacapa varies significantly throughout the year. The wetter season lasts 5.2 months, from May 17 to October 25, with a greater than 27% chance of a given day being a wet day. The month with the most wet days in Zacapa is September, with an average of 13.7 days with at ...

This report illustrates the typical weather for Guatemala City and Colombo year round, based on a statistical analysis of historical hourly weather reports and model reconstructions from January 1, 1980 to December 31, 2016.

June Weather in Flores Guatemala. Daily high temperatures decrease by 4°F, from 92°F to 89°F, rarely falling below 83°F or exceeding 96°F. Daily low temperatures are around 73°F, rarely falling below 70°F or exceeding 76°F. The highest daily average low temperature is 74°F on June 4. For reference, on May 3, the hottest day of the year, temperatures in Flores typically range ...

The average daily incident shortwave solar energy in Flores is gradually decreasing during the spring, falling by 0.8 kWh, from 6.3 kWh to 5.5 kWh, over the course of the season. The highest average daily incident shortwave solar energy during the spring is 6.8 kWh on March 28.

Over the course of November in Guatemala City, the length of the day is gradually decreasing from the start to the end of the month, the length of the day decreases by 16 minutes, implying an average daily decrease of 33 seconds, and weekly decrease of 3 minutes, 51 seconds. The shortest day of the month is November 30, with 11 hours, 20 minutes of ...
