Battery hazards: Batteries come in many forms and sizes, from station-type batteries and solar battery banks to high-energy EV batteries. They all pose similar hazards: shock, fire risk, and thermal runaway (when a battery can no longer dissipate heat as fast as it's generated), and with large battery systems, arc flash.

On the other hand, other technologies can cover a very broad range of storage sizes without any additional system costs. The flexibility of the high voltage system is more limited & ndash; the coverage for the smaller ...
