Does India need a large-scale energy storage solution?

As India scales up renewable energy generation, it needs innovative, large-scale energy storage solutions that can help maintain grid stability and ensure a consistent supply of clean energy. Consider the experience of Tamil Nadu, a state rich in wind energy.

Is India a key market for grid-scale energy storage?

Since India will thus be a key market of grid-scale energy storage, this review aims to give a holistic picture of the global energy storage industry and provide some insights into India's growing investment and activity in the sector.

Could flow batteries be a cornerstone of India's storage strategy?

If India can incentivize research and development in this area, flow batteries could become a cornerstone of its storage strategy. Sodium-ion batteries are another attractive alternative to traditional Li-ion technology, especially as their raw material reserves are abundant, easy to extract, and low cost.

How India is promoting the adoption of energy storage systems?

India has begun to invest in energy storage and develop policy to support the development of battery storage. The Ministry of Power in India has taken a significant step in promoting the adoption of energy storage systems (ESS) by introducing an Energy Storage Obligation (ESO) alongside the Renewable Purchase Obligation (RPO).

Can India diversify its energy storage portfolio?

The facility is the first large-scale project of its kind in China, and the first phase of a 100 MWh global project. Sodium-ion technology offers India a path to reducing its dependence on lithium and making energy storage more affordable. To diversify its energy storage portfolio, India must look beyond its standard toolbox.

Are flow batteries the future of energy storage?

Another cutting-edge technology is flow batteries, which store energy in liquid electrolytes, offering longer duration storage at a lower cost. Flow batteries are already in use in California's energy storage market, helping the state manage its solar and wind power surges.
