Is Indonesia's energy transition progress stalled in 2024?

Jakarta, December 5, 2024 - The progress of Indonesia's energy transition throughout 2024 has stalled. The government's move to revise the National Energy Policy has actually lowered the target for achieving renewable energy from 23% to 17-19 percent in 2025. Indonesia's energy transition status has not moved from the consolidation stage.

How will Indonesia's New NEP affect the energy sector?

The revised NEP, expected to be released this year, will reduce the renewable energy target from 23% by 2025 to between 17-19% in the energy mix. As a result, Indonesia's climate commitments in the energy sector may progress slower than previously anticipated.

Will Indonesia's energy transition be a good idea?

Evidence suggests that Indonesia's energy transition should be well under way. The government has set a target to support renewable energy development in the New Energy and Renewable Energy Bill through increasing on-grid renewable capacity, converting diesel power generation to solar and expanding rooftop solar.

What is Indonesia's Energy Plan?

The national energy plan sets an ambitious renewable energy target of a 23% contribution to Indonesia's energy mix by 2025, ten percentage points higher from the current 13%. This creates opportunities in sub sectors such as solar, biofuel, waste-to-energy, and electric vehicles.

Is Indonesia ready for phasing out coal by 2050?

In 2023, Indonesia's energy transition began to gain momentum. The Ministry of Energy and Mineral Resources has started inter-ministerial discussions to prepare a roadmap for phasing out coal by 2050. JETP CIPP has launched an agreement for the early retirement of the Cirebon PLTU.

How much electricity does Indonesia use a year?

From 1990 to 2020, the country's electricity consumption has grown from 29.48 TWh to 268.12 TWh or more than 800%. According to Indonesia's Minister of Energy and Mineral Resources, Indonesia's oil reserves are only sufficient for 9.5 years.
