

Indonesia vgr energy

Will Indonesia see a boom in renewables?

Indonesia has not yet seen a boom in renewables, resulting in fossil fuels meeting its electricity demand growth. The National Energy Policy (NEP) 2014 set a target of 23% of renewables in the energy mix by 2025, however, this target is likely to be reduced to between 17-19% in the revised NEP currently being developed.

Will Indonesia's energy transition be a good idea?

Evidence suggests that Indonesia's energy transition should be well under way. The government has set a target to support renewable energy development in the New Energy and Renewable Energy Bill through increasing on-grid renewable capacity, converting diesel power generation to solar and expanding rooftop solar.

What is Indonesia doing with its energy storage capacity?

Indonesia is currently building on its storage capacity through the planned/ongoing installation of 5 MW battery energy storage systems (BESS), linked to PLN's renewable sites. Indonesia is also building its first utility-scale integrated solar and energy storage project in Nusantara.

Does Indonesia have a battery energy storage system?

To work around this, electricity can be generated during the country's windy or sunny periods, and the excess can be stored for use in latent periods. Indonesia is currently building on its storage capacity through the planned/ongoing installation of 5 MW battery energy storage systems (BESS), linked to PLN's renewable sites.

Is Indonesia ready for the future of energy?

Through the Ministry of State Owned Enterprises, OJK, Bank Indonesia, and other players, Indonesia undoubtedly has the means to do this. The future of energy is increasingly clear -- it will be renewables-focused, lower cost, and cleaner.

What is the current electricity supply and demand scenario in Indonesia?

We analyzed the current electricity supply and demand scenario in Indonesia, including both peak demand and total installed generation capacity (Figure 1). Demand across the country totals to 40 gigawatts (GW), with the Java-Bali area contributing to 80% of this figure and highlighting significant regional variations in demand.

Indonesia's mining industry is rapidly expanding on demand for the minerals needed to help power the global energy transition, like nickel, cobalt and bauxite. But experts say it's coming at a cost for thousands of communities ...
