What is Astrid Energy Enterprises?

Astrid Energy Enterprises, established in 1996, is active in all strategic areas of energy conversion. It offers custom products according to customer's specific requests and standard UPS systems with a power range from 5 to 800 kVA. Astrid Energy Enterprises proposes these solutions on the market.

Are data centers consuming too much energy in Ireland?

Ireland embraced data centers that the AI boom needs. Now they're consuming too much of its energy. CLONDALKIN, Ireland (AP) -- Dozens of massive data centers humming at the outskirts of Dublin are consuming more electricity than all of the urban homes in Ireland and starting to wear out the warm welcome that brought them here.

Why is Ireland still reliant on fossil fuels?

Ireland is still heavily reliant on burning fossil fuels to generate electricity, despite a growing number of wind farms sprouting across the countryside. Further data center expansion threatens Ireland's goals to sharply cut planet-warming emissions.

Does Ireland still have a peat-fired power plant?

(AP Photo/Bram Janssen) Ireland has largely banned the sale of peat and shuttered the last remaining peat-fired power plants. But the state-supported company at the helm of peat extraction, Bord na Móna, still controls vast tracts of former bogland.

Is Ireland a great home for AI expansion?

Ireland has all the elements to make it a "great home for AI expansion," he said. "What's preventing us from being able to leverage that is the fact that the power constraints that we have, or the power moratorium that we have, is greatly impacting our ability to provide space for customers," Lahey said.

Ireland's energy supply remains heavily dependent on imported fossil fuels. In 2023, 82.6% of Ireland's energy came from fossil fuels. Ireland set a record high of 23.38 TWh in renewable energy use across electricity, transport, and heat for 2023, however its overall renewable energy share (RES-overall) was just

Ireland's national energy-related emissions in 2023 were at their lowest level in over 30 years. Energy-related emissions in 2023 were 31.4 MtCO₂ eq, down 8.3% on 2022 levels, and lower even than those observed during the height of ...

National energy related emissions decreased by 8.3% in 2023 reaching their lowest level in thirty years. The data shows good signals of progress, but Ireland will have to increase the rate of change significantly to deliver on its legally binding targets.. Ireland's total energy demand increased by 0.8% in 2023, led mainly by increased energy demand for ...
