Does Israel have a potential for solar energy production?

Israel's location and climate allow a high potential for solar energy production. This report investigates solar and renewable energy development in Israel's past, and present, as well as future plans. It presents main players in the space such as existing and future government and independent initiatives.

Will solar help Israel achieve energy independence?

The Israeli government is betting hard on solar and energy storage to help the nation towards energy independence. Energy minister Yuval Steinitz this week announced a new plan to deploy around 15 GW more solar capacity to help raise the 2030 target for the proportion of national electricity drawn from renewables from 17% to 30%.

Are photovoltaic solar panels available in Israel?

There are various size fields with photovoltaic solar panels in Israel. These solar energy producers have an agreement with the Israeli government, ensuring the electric company will purchase the energy at a price that fluctuates according to the market's cost production. Between 2004 - 2017 Israel's energy usage more than tripled itself.

Why is Israel introducing a solar PV tariff?

The Electricity Authority of Israel has introduced a tariff for solar PV systems that are distributed and use energy storage in order to manage grid demand. The country aims to reach 30% renewable energy in the network by 2030 but struggled to meet its previous 10% target by 2020.

How does Israel support solar development?

Developers installed around 120 MW of solar in Israel last year. The nation supports PV development through tenders for large scale projects and an incentive scheme for rooftop PV which includes net-metering and feed-in tariffs. This content is protected by copyright and may not be reused.
