

It s hard to make money from energy storage

Can energy storage make money?

Energy storage can make money right now. Finding the opportunities requires digging into real-world data. Energy storage is a favorite technology of the future--for good reasons. What is energy storage? Energy storage absorbs and then releases power so it can be generated at one time and used at another.

Do investors underestimate the value of energy storage?

While energy storage is already being deployed to support grids across major power markets, new McKinsey analysis suggests investors often underestimate the value of energy storage in their business cases.

Why do energy storage projects need project financing?

The rapid growth in the energy storage market is similarly driving demand for project financing. The general principles of project finance that apply to the financing of solar and wind projects also apply to energy storage projects.

Can you finance a solar energy storage project?

Since the majority of solar projects currently under construction include a storage system, lenders in the project finance markets are willing to finance the construction and cashflows of an energy storage project. However, there are certain additional considerations in structuring a project finance transaction for an energy storage project.

Could stationary energy storage be the future?

Our research shows considerable near-term potential for stationary energy storage. One reason for this is that costs are falling and could be \$200 per kilowatt-hour in 2020, half today's price, and \$160 per kilowatt-hour or less in 2025.

Are energy storage products more profitable?

The model found that one company's products were more economic than the other's in 86 percent of the sites because of the product's ability to charge and discharge more quickly, with an average increased profitability of almost \$25 per kilowatt-hour of energy storage installed per year.
