Netherlands: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO 2 - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

From increasing taxes to new policies, this is how energy prices in the Netherlands are changing next year. The Netherlands is getting rid of the price ceiling. At the start of 2023, the Dutch government introduced a price ceiling for gas and electricity meant to protect households from price fluctuations, reports the NOS.

These sectors have a cumulative emissions budget of 830 megatonnes for the period 2021-2030. In the projection, the Netherlands stays well below this figure with 781-819 megatonnes, which is partly due to the sharp decrease in emissions over the past two years because of COVID-19, higher energy prices, and the rapid
