What is China-Kazakhstan Green Energy Cooperation?

The Kapshagay photovoltaic power station, one of the largest single solar power projects in the Central Asian country, is a part of the China-Kazakhstan green energy cooperation initiative, jointly invested in and constructed by the Chinese company Universal Energy and Kazakh counterparts.

How efficient is solar energy in Kazakhstan?

The potential of solar energy in Kazakhstan is estimated at 16% efficiency and 2.5 billion kWh per year, which corresponds to an area of about 10 km² of solar cells. Solar energy can be widely used in two-thirds of the territory of the Republic of Kazakhstan, with an average efficiency of modern solar panels ranging from 15-25%. The passage does not directly mention the efficiency of solar energy in Kazakhstan being 2.5 billion kWh per year, but rather the potential of it. So, the efficiency value in the passage is the efficiency of the solar cells.

Why is green energy important in Kazakhstan?

Green energy not only facilitates Kazakhstan's transition towards sustainable development but also furnishes local residents with access to cost-effective electricity. "Particularly in the southern regions, there has historically been a deficit of electricity, necessitating transmission from the northern regions.

Is there a solar PV plant in Kazakhstan?

Both concentrated solar thermal and solar photovoltaic (PV) have potential. There is a 2 MW solar PV plant near Almaty and six solar PV plants are currently under construction in the Zhambyl province of southern Kazakhstan with a combined capacity of 300 MW.

Can solar power drive Kazakhstan's Energy Transition?

However, Kazakhstan's solar ambitions do not fully tap into its potential, and the technology could play a far larger role in the country's energy transition due to its low cost and flexibility. The focus now is on leveraging solar's comparative advantages to drive forward Kazakhstan's decarbonisation and harness its significant solar resources.

What is the energy potential of Kazakhstan?

Kazakhstan has significant potential for renewable energy. The wind potential is estimated to be 1.8trn kWh per year, which is close to 10 times Kazakhstan's current energy consumption, according to UN estimates. Solar energy also has great potential given the number of sunny hours per year, typically between 2,200 and 3,000 hours, implying a capacity of 1,300-1,800kW/sqm per year. Hydro power is another renewable energy source with potential in Kazakhstan.
