power to the grid. The small grid tie inverter just puts out power when the home grid is on. When the wind turbine is rotating, and the output of the voltage is in the range of the rated input voltage of the inverter, the wind turbine will produce power, and the grid tie inverter will change the power from wind turbine to the home grid.

This model grid tie has designed for wind turbines that put out 3 phases AC voltage can maintain the rotating speed of the wind turbine and keep the voltage from the wind turbine always at the range of the rated range of the grid tie inverter also has a high voltage protection function, when the wind is too big, and the dump load ...
