One surprising table is of announced funding support for LDES in a group of six "indicative countries": Chile is at the top with US\$2 billion of announced commitments, Hungary second with US\$1.16 billion - although in both cases those commitments extend to all energy storage technologies, with long-duration energy storage included.

US utility company Alliant Energy has moved forward with a long-duration energy storage (LDES) project based on Energy Dome's carbon dioxide-based (CO₂-based) technology. Alliant Energy said last week (14 August) that it has filed a project application with the regulatory Public Service Commission (PSC) of Wisconsin for its Columbia Energy ...

Long duration energy storage technologies paired with renewables could reduce global industrial greenhouse gas emissions by 65%. One of the most attractive current applications for LDES technologies is to support firm renewable electricity for off grid applications based on representative case studies

Long duration electricity storage can provide an important contribution to decarbonising our energy system. For example, it can store renewable power and discharge it during periods of low wind.
