BMS - the BMS on the battery will give the amount of amps it can deliver- 100a or 150a or 200a are the ones I have seen. You will need at least 300a to power your inverter. Two batteries in parallel w/ 150a BMS's will work - two batteries with 100a BMS's will cause you issues. Fewer bigger batteries will be better than LOTS of 100ah batteries.

In my case my coach will not have power available and will get below freezing occasionally so charging my LiFePO4 battery is not practical, and it will be covered so solar will not work. My plan is to disconnect my solar charger, pull LiFePO4 battery down to about 60%, turn off both chassis and coach batteries and hope for the best.

The 240 v side (called shore power but includes generator and solar power sources) provides power to the house 12v system including the house batteries. You will have a Magnum inverter and probably a display that shows bulk/absorb/float charging states and related voltages (bulk highest, float lowest).

My monaco wiring diagrams show wiring as you described. Leads from solar panels to controller and Yellow and Orange wires to battery cutoff switches and white wire to Ground. Looking at switches I see a 8 Gauge Black wire on house battery switch and Yellow wire to house battery Ground. Previous owner had replaced controller and wiring.
