

What percentage of Mongolia's Electricity is produced by coal?

Domestic consumption of coal accounts for about 70% of Mongolia's primary energy and makes up most of the electricity generation, accounting for about 87% of the domestic electricity production in 2019.

How much energy does Mongolia use?

Mongolia had a total primary energy supply (TPES) of 6.66 Mtoe in 2019. Electricity consumption was 7.71 TWh. Mongolia is a big producer of coal, which is mostly exported.

How can Mongolia improve its energy sector?

Mongolia's commitment to the Paris Agreement and the U.N. Climate and Clean Air Coalition 2030 are closely linked with Ulaanbaatar's pursuit of reinvigorating its energy sector. For these mega projects to be successful and fruitful, Mongolia must tackle corruption and strengthen the country's investor profile.

What are Mongolia's Energy goals?

The government of Mongolia has set targets to increase the share of generation capacity from renewable energy sources to 20% by 2023 and 30% by 2030, and to build export-oriented power plants.

Are Mongolia's energy policies failing?

In an interview with Bloomberg Mongolia, economist Khashchuluun Chuluundorj highlighted decades of failed energy policies. He said, "Even ten years ago, Mongolian policymakers had the prognosis of increasing energy demand. There have been many project proposals and plans, but unfortunately, none of them have been implemented."

Does Mongolia need a coherent energy strategy?

A cohesive strategy aimed at improving the country's energy sector has become a dire necessity. In November 2023, Mongolia experienced days of intermittent energy shortages.
