Does Myanmar have a power supply gap?

Myanmar's power sector will likely continue to experience significant challenges. To sustain the current level of power supply would require adding 300-500 MW every year until 2030. Scenario analysis on the power supply-demand gap illustrates that available generating capacity is projected to not meet the growing demand.

How can Myanmar improve its power system?

Rebuilding Myanmar's power system will require establishing trust to develop the power sector. Developing solar PV can add incremental generating capacity in a relatively fast manner.

What are the key challenges in Myanmar's power sector?

Key Challenges in the Power Sector Myanmar's power sector expanded rapidly during the past decade, relying on natural gas and hydropower to meet fast-growing electricity demands. The total installed generating capacity increased from about 2,800 MW in 2010 to 7,100 MW in 2022.

Which coal-fired power plant is in Myanmar?

Tigyit coal-fired power plant, the only coal power plant in Myanmar, operated by a joint venture between the China National Heavy Machinery Corporation and a group of Myanmar businessmen affiliated with the military, is producing 120MW and is connected to the national grid.

Is there a reliable assessment of current and future electricity demand in Myanmar?

Currently, there is no robust and credible assessment of current and future electricity demand in Myanmar.

Does Myanmar have a power crisis?

"Half of Myanmar's electricity comes from gas. The looming crisis will worsen the current power cuts significantly. Gas exports also account for half of the currency reserves, which the military desperately needs. Energy presents an existential crisis for Myanmar," de Langre said.
