

Nauru power energy

How can Nauru reduce its reliance on fossil fuels?

In order to achieve Nauru's ambitious goal of reducing the country's high reliance on imported fossil fuel by meeting 50% of its energy needs from renewable energy sources by 2015,¹ the Nauru Government requested technical support from GIZ, SPC and IRENA in the development of a Nauru Energy Road Map in early 2012.

Does Nauru have an energy road map?

Currently Nauru is working on an Energy Road Map, including action plans for the development of renewable energy and energy efficiency sufficient to significantly lower imports of diesel fuel for electricity generation.

What type of energy is used in Nauru?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Nauru: How much of the country's energy comes from nuclear power?

How did Nauru get its electricity & water services?

Until 2005, the Nauru Phosphate Corporation provided all the island's electricity and water services. In 2005 the Nauru Utility Authority (NUA) was formed to separate the water and electricity utilities function from the phosphate corporation. It was later decided to corporatize NUA and the Nauru Utilities Corporation (NUC) was created.

Why is Nauru so vulnerable to solar energy?

Solar energy is the only proven renewable energy resource which could be utilised in short to medium term to reduce dependency on fuel imports for electricity generation. The country's vulnerability is also increased by its isolation from other Pacific Islands. In 2012, SPC released an energy profile of Nauru based on 36 energy security indicators.

What does imported energy mean for Nauru?

Imported energy for Nauru means fossil fuel imports. Unambiguous records of the quantity of fuel imports, their timing and the specific type of fuel imported are vital to the determination of the Nauru energy balance.

In 2021, Nauru produced 0.00014380280034383% of the world's total energy generation. Total Electricity Generation of Nauru (2000-2021) Between the year 2000 and 2021, Nauru's electricity generation has increased from 0.03 TWh to 0.04 TWh, a 33.33% increase in produced Terawatt hours during a 21 year time period.

The Nauru Energy Policy Framework (NEPF) was endorsed in 2009 and layout broad aims and strategies for the energy sector, including power, renewable and energy efficiency. The NUC currently provides all electricity services to Nauru except for RPC and the main processing plant of RONPHOS. The status of the utility as a corporation was ...

Nauru relies on diesel imports to generate the majority of the country's electricity. Given the escalating impacts of climate change on the Pacific Islands and the soaring cost of fossil fuels, New Zealand's Ministry of Foreign Affairs and Trade (MFAT) allocated funding to investigate solutions to increase Nauru's energy resilience to these challenges.

The project will reduce Nauru's dependence on diesel, bringing down the costs in electricity generation, improving local power supply and increase the share of renewable energy generation. Most importantly, it will significantly add to Nauru's environmental protection efforts, thereby achieving its sustainable development goals.

1.2 Nauru Energy Sector Overview Nauru is located just south of the equator about half way between Sydney and Honolulu. It is the smallest state in the Pacific with an area of around 21 square kilometres and a 2011 estimated population of more than 10,000 people. In addition, there are around 1,000 people housed in the Regional Processing Centres.
