A neutrino (/ n j u: ' t r i: n o? / new-TREE-noh; denoted by the Greek letter  $\nu$ ) is an elementary particle that interacts via the weak interaction and gravity. [2] [3] The neutrino is so named because it is electrically neutral and because its rest mass is so small that it was long thought to be zero. The rest mass of the neutrino is much smaller than that of the other known elementary ...

NEUTRINO ENERGY® Group: A worldwide team of scientists and various international research centers, which deal with application research, the conversion of invisible radiation spectra of the sun, among other things the neutrinos in electric power.

The Neutrino Energy Group's work is not just a technical marvel; it is a paradigm shift in how we approach energy generation. By harnessing the power of neutrinos and other non-visible forms of radiation, the group is leading the charge towards a future where renewable energy is not just an alternative but the cornerstone of global energy systems.

The neutrino is perhaps the best-named particle in the Standard Model of Particle Physics: it is tiny, neutral, and weighs so little that no one has been able to measure its mass. Neutrinos are the most abundant particles that have mass in the universe. Every time atomic nuclei come together (like in the sun) or break apart (like in a fission reactor or particle accelerator), they produce ...
