

New Zealand tbb renewable

Which energy sources are used in New Zealand?

Data tables for renewables [XLSX,76 KB]A large amount of New Zealand's total primary energy supply (TPES) comes from renewable resources. Hydro,geothermal,wind and bioenergyare used to produce electricity in New Zealand. For more information on electricity generation see the Electricity section in Energy in New Zealand.

What is a total primary energy supply in New Zealand?

Total primary energy supply: The total amount of energy available for usein New Zealand,accounting for domestic production and trade. Total final consumption: Energy consumed by end-users such as factories and businesses. The share of renewables in total primary energy supply fell slightly,down 0.7 percentage points to 42.8 per cent.

How efficient is geothermal energy in New Zealand?

The efficiency is around 15%,and for this reason geothermal energy supplies less than a fifth of New Zealand's electricity even though it contributes to over half of the renewable energy supply. For more information see the renewables section in Energy in New Zealand.

Why is New Zealand transitioning to a highly renewable electricity system?

New Zealand is transitioning to a highly renewable electricity system. This change will require increased and accelerated investment in new electricity generation to match demand growth and the retirement of thermal power plants.

What percentage of New Zealand's electricity is renewable?

Renewable electricity in New Zealand is primarily from hydropower. In 2022,87%of the electricity generated in New Zealand came from renewable sources. In September 2007,former Prime Minister Helen Clark announced a national target of 90 percent renewable electricity by 2025,with wind energy to make up much of that increase.

How does New Zealand meet its energy needs?

New Zealand relies on a combination of domestically produced and imported fuelsto meet its energy needs. A common metric used internationally to measure this is a self-sufficiency indicator,which shows how well we can meet our own energy supply needs through domestic production.

Renewable electricity in New Zealand is primarily from hydropower. In 2022, 87% of the electricity generated in New Zealand came from renewable sources. [1] In September 2007, former ...
