The world we're wired into is an alternate universe. We don't mean space-time continuums or matrices. Speaking electrically, of course, our modern consumption is mainly wired for alternating current as opposed to the direct current that dominated at the beginning of the power grid era in the late 19 th century.. Direct current was more efficient at higher voltages, ...

But because of grid constraints, they are choosing to be off-grid, she said. Solar and storage microgrids generally aren't economically feasible for 24/7 operations, Akhavan said. Instead microgrid providers are suggesting off-grid microgrids that use fossil fuels, renewable natural gas (RNG) and alternative fuels. "This is an interesting ...
