

# Picture of german house super energy storage tank

What is Germany's largest heat storage tank?

With a height of 45 meters, a diameter of 43 meters and a capacity of 56 million liters, Germany's largest heat storage tank will store district heating water at a temperature of 98 degrees Celsius. "Heat storage is an important component regarding flexibility in the grid, which is needed to feed in more and more renewable energies.

What is the largest European battery-based energy storage project?

In May 2023, we launched our largest European battery-based energy storage project at the Antwerp platform in Belgium. With its 40 containers, the site will develop a capacity of 75 MWh, which is equivalent to the daily consumption of almost 10,000 homes.

Is Germany a good place to invest in energy storage?

While the demand for energy storage is growing across Europe, Germany remains the European lead target market and the first choice for companies seeking to enter this fast-developing industry. The country stands out as a unique market, development platform and export hub.

What is Germany's largest heat accumulator?

At 45 metres high, with a diameter of 43 metres and a capacity of 56 million litres, Germany's largest heat accumulator will store district heating water at a temperature of 98 degrees Celsius and therefore play a significant role in driving forward the heat and energy transition in Berlin and contribute to energy security in Germany.

Why is Germany a good place to study energy storage?

Germany boasts a dense landscape of world-leading research institutes and universities active in the energy storage sector. They work closely together with industry to bring innovations to the market. The federal government supports research and development in the energy storage, hydrogen, fuel cell, and electric vehicle sectors.
