

Does Armenia have solar energy?

Armenia has significant solar energy potential: average annual solar energy flow per square metre of horizontal surface is 1 720 kWh (the European average is 1 000 kWh),and one-quarter of the country's territory is endowed with solar energy resources of 1 850 kWh/m² per year. Solar thermal energy is therefore developing rapidly in Armenia.

What are the main energy sources in Armenia?

Since 1996 three main energy sources for electricity generation in Armenia were natural gas,nuclear power and hydropower. Despite a lack of fossil fuel,Armenia has significant domestic electricity generation resources.

How much solar power will Armenia have in 2024?

The government expects solar PV capacity to reach 100 MWby 2024 and 1,000 MW by 2030. According to the Ministry of Territorial Administration and Infrastructure,which oversees the energy sector,wind energy potential in Armenia is approximately 450 MW of total installed capacity.

How does Armenia generate electricity?

Most of the rest of Armenia's electricity is generated by the natural gas-fired thermal power plantsin Yerevan (completed in 2010) and Hrazdan. Upon gaining independence,Armenia signed the European Energy Charter in December 1991,the charter is now known as the Energy Charter Treaty which promotes integration of global energy markets.

What is Armenia's Energy Strategy?

Since the IEA's last review in 2014/15,Armenia has developed an Energy Strategy,released in 2021,which calls for up to 1 000 MW of solar PV capacity to be installed by 2030,lifting the share of grid-connected solar to 15% of generation.

How much will Armenia's oil pipeline cost?

Armenian Energy Minister Armen Movsisian has said that the construction will take two years and cost Armenia about \$100 million. Earlier Iran's oil minister said that the 365-kilometer pipeline could go on stream by 2014.
