

What is South Korea's energy mix by 2030 & 2036?

As per the targets, South Korea's energy mix by 2030 and 2036 are as follows: Despite being one of the most innovative countries, South Korea is a climate laggard. The share of renewable energy in the power mix of South Korea is just 9% as of 2021. Compared to other G20 countries, South Korea is phasing out coal much more slowly.

What is South Korea's 10th basic energy plan?

On January 11 2023, South Korea's Ministry of Trade, Industry and Energy (MOTIE) finalised its 10th Basic Energy Plan's main content. The major highlight is that, in the coming years, South Korea will prioritise a shift back to nuclear energy.

Is South Korea's energy policy right?

In the geo-economic context of a global campaign for clean energy and climate action, the direction of South Korea's energy policy is right, but it needs to be depoliticized and its speed readjusted. South Korea must realize that carbon-neutral growth would not be made possible without nuclear energy.

Why is nuclear energy important in South Korea?

Nuclear energy accounts for nearly 30% of South Korea's total electricity production, making it a crucial source of power for the nation. On January 11 2023, South Korea's Ministry of Trade, Industry and Energy (MOTIE) finalised its 10th Basic Energy Plan's main content.

Does South Korea have an energy crisis?

In an era of growing energy insecurity and growing energy costs, South Korea has felt the perverse effect of a shrinking trade surplus and energy-driven inflation at home. In September 2022, the Yoon government announced its plan to cut the energy consumption of public organizations by 10 percent.

How did South Korea achieve energy security and safety?

Part of the book series: The Political Economy of the Asia Pacific (PEAP) In an increasingly competitive geo-economic and geo-energy landscape in the Indo-Pacific, South Korea's Moon Jae-in government (May 2017-May 2022) attempted to achieve energy security and safety at the same time by accelerating renewables while phasing out nuclear energy.
