What is a diversion of electrical energy?

A diversion of electrical energy is any method or device used by any person that prevents an electric meter from duly registering the quantity of electrical energy supplied by the Company and/or the taking of any electrical current without the Company's consent.

Where is high voltage electricity stored?

High voltage electricity is stored in the high voltage battery (commonly referred to as EV battery). Components such as an electric motor, generator, compressor, inverter, heater and air conditioner are typically part of the high voltage electric system in today's EV.

How do you disable a high voltage EV?

The method of disabling the high voltage system is manufacturer specific. Never assume that the EV is powered down because it is silent. Never touch, cut or open any orange high voltage power cable or high voltage components without personal protective equipment. Do not cause any impact that could potentially result in any damage.

Should I remove a high voltage battery from my EV?

Vehicle manufacturers recommend removing the high voltage battery as the safest and most time efficient method for handling EV components. However, when dismantling any EV components from the vehicle it is absolutely essential to use utmost care and to comply with the important safety warnings listed in this document.

How to disconnect high voltage battery connection cables?

Before disconnecting the high voltage cable terminals, make sure that the voltage between the terminals is 0 V with a suitable tool. Then, disconnect the high voltage battery connection cables from the high voltage battery. Insulate the vehicle high voltage battery connection cables using electrical insulation tape.

Can a high voltage electrical system be treated as a regular ELV?

Vehicles containing a high voltage Electrical System have particular removal requirements for the treatment of the high voltage system before the vehicle can be treated as a regular ELV. It is important to recognize and understand the High Voltage Electrical System and its specifications for the safe handling of the vehicle at ELV stage.
