

# Romania pts energy

What is the energy sector like in Romania?

Romania's energy sector is key to its evolving economy and security policy. It has a diverse energy mix, including coal, natural gas, nuclear, hydroelectric, and renewable sources. The largest share of electricity production historically came from coal and natural gas, followed by hydroelectric and nuclear power.

What is Romania's energy transformation?

Renewable energy sources, nuclear power (via completion of Cernavoda NPP Units 3 and 4, refurbishment of Unit 1, and deployment of SMRs), and natural gas - the latter considered a transitional energy source - form the backbone of Romania's energy transformation. Romania's coal production is expected to decrease by 12.5% in 2023.

Who produces electricity in Romania?

Electric power was provided by the Romanian Electric Power Corporation (CONEL). Energy sources used in electric power generation consisted primarily of nuclear, coal, oil, and liquefied natural gas (LNG). The country has two nuclear reactors, located at Cernavoda, generating about 18-20% of the country's electricity production.

Who manages the electricity transmission system in Romania?

The electricity transmission system in Romania and the interconnection system with its neighboring countries is managed and operated by Transelectrica SA company (the Romanian TSO). They also manage the market operation, the grid and market infrastructure development, and the security of the national energy transmission system.

Where does Romania import electricity?

Romania exports and imports electricity to and from neighboring countries, including Hungary, Bulgaria, Serbia, Ukraine, and Moldova, and is also part of the European Union's internal energy market, which aims to create a single, competitive market for electricity and gas across EU member states.

How much investment does Romania need to achieve the energy strategy?

Investment needs to achieve the objectives of the Romanian Energy Strategy are estimated as EUR 127 billion overall from 2021 to 2030 (annually around 6% of current GDP), mostly in energy demand sectors. The use of Union level funding sources such as cohesion policy or the Modernisation Fund is not yet specified.

PTS is the connection asset partner for the installation of a 10 MWdc solar farm at New Plymouth Airport. This solar farm will supply renewable energy to the airport, its 12 customers, and surrounding businesses. Excess energy will be sold to the New Plymouth District Council via Ecotricity. Assets. 10 MWdc solar farm;  
Private energy network

3 &#0183; Wind and solar power projects with a combined capacity over 1.5 GW in Romania are eligible for

subsidies under a contract-for-difference (CfD) scheme. The first round of auctions resulted with ten and eleven winning bids, respectively. ... the Ministry of Energy finally selected projects of an overall 1.53 GW, slightly more than the quota, in ...
