

Can distributed energy storage equipment be installed in microgrids and distribution network?

In the above research, the distributed energy storage equipment can be installed in microgrids and distribution network to smooth the power fluctuation caused by renewable energy generation, but the disorderly charging and discharging may lead to the low utilization of energy storage equipment capacity.

What is a microgrid Alliance?

The microgrid alliance prioritizes the power exchange among microgrids, which can improve the on-site consumption of renewable energy. The benefit distribution mechanism is used to allocate "cooperative surplus" and improve the operational economy of the microgrid group. Jinpeng Qiao: Writing - original draft. Yang Mi: Writing - review & editing.

Can microgrids improve the node voltage quality of ADN?

The network loss power of ADN. In conclusion, the power interaction among microgrids can improve the node voltage quality of ADN and reduce network loss, i.e., the voltage deviation is decreased by 8.5%, and the network loss is reduced by 11.7%.

Do microgrids affect distribution network?

Comparing Case 1 and Case 2, since the power interaction among microgrids is considered in case 1, the purchase and sell power between microgrids and distribution network are reduced by 4176 kW and 4066 kW, respectively, which can decrease the impact of microgrids on distribution network.

What is a multi-microgrid distribution system?

A typical topology of the multi-microgrids distribution system is shown in Fig. 1. The microgrid organically combines the photovoltaic (PV), wind turbine (WT), and energy storage system (ESS) to meet the local load demand. When the MMG generation is excessive or insufficient, the MMG will exchange power flow with ADN.

Can decentralized energy management be used in multi-microgrids?

In recent years, research on decentralized or distributed energy management for active distribution systems with multi-microgrids has been carried out.

The term "Distributed Generation" has been devised to distinguish this concept of generation from centralized conventional generation. The distribution network becomes active ...
