Is the IBM ESS 3500 compatible with all IBM elastic storage system models?

The IBM ESS 3500 is compatible with all IBM Elastic Storage System models. The IBM ESS 3500 can be ordered either half populated (12) or fully populated (24) NVMe drives. For more information about the IBM ESS 3500, see IBM Elastic Storage System 3500. The IBM ESS 3500 is part of the third generation of IBM ESS.

What is IBM ESS 3500 data movement?

The data movement can be used to automate and optimize data placement between IBM ESS 3500 and other storage within the IBM Spectrum Scale storage infrastructure. This appendix also provides you with the information to consider when not using the switches that IBM provides and supports for the management network.

Does IBM ESS 3500 support AI and ML workloads?

For example, in the document, a single IBM ESS system provides a read throughput of 48 GBps. Adding a second IBM ESS system increases the read throughput to 94 GBps, which is almost twice the throughput of a single IBM ESS system. AI and ML workload can benefit from the outstanding performance capabilities of the IBM ESS 3500 system.

Does IBM ESS 5000 have a software RAID check?

Software RAID checks are present across all IBM Spectrum Scale RAID offerings (such as IBM ESS 5000, IBM ESS 3500, and ECE). Devices (such as IBM ESS 3500) that are integrated with IBM Spectrum Scale hardware, also get hardware checks and monitoring. For more information about how to use the mmhealth command, see mmhealth command.

What is an IBM ESS 3500 hybrid deployment model?

In an IBM ESS 3500 hybrid deployment model, the overall performance of a particular workload depends on the amount of data that is stored on NVMe disk and the amount of data stored on hard disk. The ILM toolkit can help you establish efficient data placement that achieves optimal use of the storage devices available on your system.

How do I manage the IBM ESS 3500?

It includes the following topics: Beginning with Version 6.1.5, for new deployments of the IBM ESS 3500 you can choose to manage the IBM ESS 3500 by ordering the POWER9 EMS hardware from IBM. Alternatively, you can provide your own hardware and run the EMS for the cluster as a virtual machine (VM).

Protocol virtual machine deployment on ESS 3500 I/O nodes Until ESS 6.1.2, the deployment of protocol nodes was supported through POWER 64 LE nodes. However, from ESS 6.1.3.1, the protocol nodes deployment is moved on ESS 3500 nodes to reduce the initial deployment cost and support the protocol deployment in the ESS 3500 environment.

The recently announced IBM ESS 3500 global data platform addresses these challenges, making data delivery for AI workloads faster, and allowing organizations to gain the benefit of their data efficiently. ESS 3500 brings exciting features that can help organizations overcome serious barriers to unlocking the value of distributed data.
