Why are battery storage options more suitable in Spain?

As a result, shorter duration storage options like batteries are more suitable in Spain. In Spain, over 50% of excess renewable energy occurs in periods where there is continuous excess for less than 12 hours i.e. a battery that chooses to charge on this energy would be able to discharge within 12 hours.

Are lithium-ion batteries a viable energy storage solution?

In the search for solutions for the storage of energy generated by renewable sources, lithium-ion batteries are currently the most widespread solutions given their performance, technological maturity and cost ratio. These systems can be used stand-alone or in conjunction with renewable energy sources, such as solar or wind energy.

What is the first electric energy storage system in Spain?

In November 2019, Iberdrola España inaugurated the first electrical energy storage system with lithium-ion batteries for distribution networks in Spain.

Where will a battery be installed in Spain?

In Castilla y León, a battery will be installed in Revilla Vallejera (Burgos), where Iberdrola España completed its first hybrid wind-solar plant in Spain in 2023. Extremadura will have two new batteries. The company will install two batteries in the province of Caceres, where the C. Arauelo I and II photovoltaic plants are located.

How do you store lithium-ion batteries?

Store lithium-ion cells in the appropriate containers. Tip: use ADR-approved containers for storage of lithium-ion batteries. Store the cells away from flammable and combustible materials. Don't store large quantities of batteries if not necessary. Keep damaged and new cells separated.
